

TESSITURA TAIANA PRESENTS FYC, THE ANTIVIRUS FABRIC

Tessitura Taiana, as the result of innovative research and thanks to its know-how in the production of Kinetech performing fabrics, has developed FYC, a new generation fabric capable of blocking the spread of viruses and bacteria.

FYC is an anti-droplet, breathable, hydrophobic, bacteriostatic, and above all virucidal fabric, meaning it can destroy and render COVID 19 inactive in seconds.

This innovative function is made possible by a physical action, guaranteed by the fineness of the fabric and its special processing, and by a chemical action thanks to the combination of silver thread and a sophisticated medical treatment.

This fabric can be used both for civil protection devices but also for accessories and clothing.
