

Creazioni Digitali s.r.l. stands out on the market for its continuous desire to experiment and grow. Through the years, in addition to the sublimation printing, it has specialized itself in new digital techniques, among them the direct printing with pigment inks which can be applied on many kinds and mix fabrics.

Its most important feature is the water saving as the classic treatments for other digital direct printings, such as steam and washing, are not necessary any more: another point for the preservation of Nature and for a market even more ecological and sustainable.

Another important novelty is the technique Teinei that allows us to print in register on structured fabrics such as laces, jacquards and devoré.

Besides, Creazioni Digitali has obtained several certifications created to reduce the environmental impact during the life cycle of a product:

GOTS and GRS respond to the growing demand and relative consumption of fibers from organic farming and recycled materials

OEKO-TEX STANDARD 100 guarantees that textile products do not contain or release substances harmful to human health, to those who process them and to those who wear them

Textilsand, from its side, is always looking for fabrics in polyamide and polyester that derive from recycled fibers to increase the ecological impact of its offer.

Creazioni Digitali and Textilsand: two different realities but with a common goal: research, innovation, quality.

They have started a new journey together which will be aimed at maintaining high quality standards and integrating them searching for new ideas and greener and greener printing methods to satisfy customer requests.
